

- Basics of Web Development.
- communication b/w all this

(1) How does internet work?

(2) Big picture of web application:

request is made to server
by user/website

↳ responds
↳ searches database

Server:

(1) sends HTML to browser

(2) sends CSS next

(3) sends JS (functionality)

(also take some data from browser to server)

(3) Frontend, Backend and API

HTML, CSS, JS → (react)
↓
tailwind bootstrap libraries

frontend & backend
interact

API response
is usually
json
format

② database
↓
(MongoDB, MySQL, PostgreSQL)

Restaurant:

backend - kitchen

frontend - tables where you are served

API - waiter

json - plates on which you are served
